

Case Report Series

The All-On-Four Concept With SPI®ELEMENT Implants and SPI®VARIOmulti Abutments

Dr. Jevgenij Travkin,
Lithuania

The Baseline Situation

Patient with partial edentulism in both jaws

A 67-year-old female patient suffered from **partial edentulism in both jaws due to periodontal disease and tooth decay**. Her **chewing function was already partially impaired** when she sought help at the dental studio.

The Treatment Strategy

All-on-four concept with immediate implant placement

- 1 Immediate implant placement after tooth extraction of four SPI®ELEMENT implants each in the upper and the lower jaw
Bone reduction procedures in both the upper and the lower jaw
Immediate loading with provisional prosthetics on straight (anterior) and angulated (posterior) SPI®VARIOmulti abutments

- 2 Placement of the screw-retained final restoration after two months

The Outcome

After the final restoration, the patient left the dental clinic with a new smile
